

Company Profile

OTTO OEHME GmbH – An institution in the cleaning industry – over 90 years of tradition and experience

In 1923 Willy Oehme, Nuremberg, founded the Lorito S.A. in Vevey, Switzerland, at the Lake Geneva. At that time the range of products was limited to the Creme Lorito, a uni-versal cleaning agent for the "housewife" to clean, polish and disinfect wood, leather, linoleum and other types of solid surfaces. The creme is produced to this day. In 1970 his son Otto Oehme (top right picture) took over the company that now had its place of business in Wendelstein south of Nuremberg. The newly founded Otto Oehme GmbH (a limited company) shifted its focus to business clients and broadened its portfolio of products gradually. In 1998 the company moved to the current premises in Allersberg that house management as well as production.

Our ambition

Due to our variety of special cleaning agents and machines we offer a complete solution for cleanliness and hygiene. Our skilled consultants attend to your needs. We organize seminars for our customers, led by well-known instructors, on a regular basis.

To maintain the continued existence of the company Ulla Oehme and Klaus Krisch joined management in 2003. Two years later the company expanded and multiple foreign subsidiaries were founded – at the moment the Otto Oehme GmbH is represented in more than 20 countries. Large-scale consumers in Germany and the EU are supplied by the company's own private haulage. In the meantime the range of products has been extended to additives, auxiliary equipment and machines. In 2010 Ulla Oehme took over the company shares and is now the full owner of the company. Since 2017 her son Carlos Oehme joined Klaus Krisch in management position.

In addition to quality and reliability, good advice and maximum customer satisfaction are important to us. Our long-standing customers include, for example, well-known companies in the hotel and catering sectors as well as numerous public institutions and industrial companies.

You will be looked after personally by our trained specialist advisors at all times. We regularly organize seminars for our customers, led by well-known speakers.

In addition to our numerous memberships in research communities and professional associations and our participation in the Bavarian Environmental Pact, we stand by our ecological commitment. We use renewable raw materials for production.

With our products "Made in Germany" and a stronger focus on sustainability, we are laying the foundation for another successful century.

Carlos Oehme
CEO

committed to the environment

The Otto Oehme GmbH is a member of multiple research communities and professional associations (such as IHO, IKW, VCI, FRT, ARGE) as well as a participant in the "Environmental Pact" of Bavaria (Umweltpakt Bayern). Since 1923 all compositions of cleaning agents and care products have always been produced in-house. They are free of CFC, chlorocarbons and aromatic solvents. In order to meet our ecological and economic obligations, we use renewable raw materials wherever possible.

Furthermore, all of our cleaning agents comply with legal regulations by directive 1999/45/EC of the EU (relating to the classification, packaging and labelling of dangerous preparations), the German Detergent and Cleaning Agent Act (Wasch- und Reinigungsmittelgesetz – WRMG, 1987), the German Chemicals Act (Chemikaliengesetz – ChemG, revision 2002) and Hazardous Substances Ordinance (Gefahrstoffverordnung – GefStoffV, 2010). That means that our products – when used properly – will not endanger the physical health of a person.

The forceful legislation of the EU, particularly the Regulation on Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), that makes special demands on environmental protection as well as health protection, is strictly adhered to at all times. If procurable we outrun these legal guidelines and offer our customers products with maximal environmental sustainability and user protection. Thus, for example, we offer products following Decision 2005/344/EC by the EU, a regulation for the EU Ecolabel. For these products an environmental assessment process according to a special questionnaire is no longer necessary. Our disinfectants are listed by the Association for Applied Hygiene (Verbund angewandter Hygiene – VAH, former DGHM), several sanitary cleaners are included in the RK-list.

In addition, our vehicle fleet is successively replaced by electric cars and get charged by solar power from the the roofs of the production halls.

Private label

your brand – our products

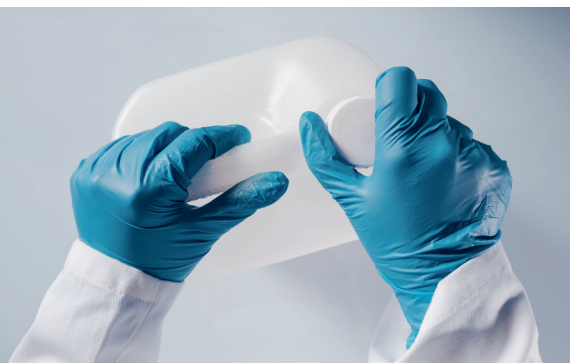

Would you like to set up your own brand in the field of cleaning products as a supplement to existing own products, to expand your product range or to open up new markets? We are happy to support you! Whether for hotels, retail chains, public institutions, hospitals or restaurants: We take care of the content and the external appearance of your product as well.

90 years of development and production experience, as well as unbeatable quality and service, are only a few reasons why we are perfectly suited as your private label partner. From the first thought, over the production, up to the distribution, we are to you gladly as your competent partner at the disposal!

From recipe development through production, filling and labeling to storage and logistics, we handle all processes for our private label customers in-house. In addition, we support you in all questions relating to label design and bottle design, advise you on the legal obligations as a manufacturer (own brand) and offer support for the measures required under the Product Liability Act (safety data sheet, BfR notification, recommendation on poison control). It goes without saying that all EU directives are adhered to.

Our high quality of the recipes and raw materials, prompt and flexible production are our key to success. We also focus on environmental compatibility and ecology, from the raw materials to packaging and shipping

You can also benefit from these advantages and build your own brand with us as a partner!

our private label services

- Comprehensive, competent and personal advice
- In-house recipes or new developments
- Product approvals and registration
- Production, filling and labeling
- Creation of product and safety data sheets
- Logistics handling (packaging, storage and shipping to customers)

advantages

- almost 100 years experience
- Use of existing infrastructures and coordinated production processes
- Higher margins
- Stand out from the competition
- Any variation of the products
- building a brand image

the private label process – from the idea to the finished product

1. Product selection (takeover, adaptation or new development)
2. Determination of the container size and number of items (at least 1200 liters)
3. Legal matters (support for compliance with legal obligations, e.g. safety data sheet, product descriptions)
4. Labels (design, review of legal requirements, printing)
5. Product outer packaging (cardboard boxes)
6. Production
7. Logistics / shipping

cleaning and care products

Product certifications, lists and standards

VAH List of Disinfectants

The VAH List of Disinfectants (Association for Applied Hygiene) is an approved reference for effective products for prophylactic disinfection. That quality assurance is relevant not only for the medical sector but also for public institutions and, in case of illness, even for private households. It is proven that the bigger part of infections have their source in private households. For the first time the VAH-list contains information on the effectiveness against viruses.

www.vah-online.de

DVG List of Disinfectants

The „Deutsche Veterinärmedizinische Gesellschaft“ (German Veterinary Medical Society – DVG e.V.) is the scientific society of veterinary medicine. The committee “disinfection in veterinary medicine” of the DVG releases lists of disinfectants which have been tested according to the guidelines of the DVG and have been found to be effective. Founded in 1951, the DVG is the oldest organization of veterinary medicine in Germany. Veterinarians from universities, industry, public authorities, ministries, research establishments and practice meet in 36 teams of professionals as well as in research groups under the auspices of the DVG.

Deutsche Gesellschaft
für das Badewesen e.V.

List of tested cleaning agents for ceramic coverings in indoor swimming pools (List RK) and

List of tested cleaning agents for tank bodies and building elements made of stainless steel in swimming pools (List RE)

The publications of the „Deutsche Gesellschaft für das Badewesen e.V.“ (DGfB) have an excellent reputation among experts and, from a technical point of view, can be put on par with the DIN standards. That is why they are an indispensable prerequisite for the safe construction and operation of public baths. Lists of tested cleaning agents, suitable for public baths, are published in regular intervals.

DIN EN 1040

Quantitative suspension test for the evaluation of basic bactericidal activity of chemical disinfectants and antiseptics

DIN 18032

DIN 18032 is a standard for the construction of sports halls for school sports, competitive sports, club sports, mass sports, amateur sports and sports for people with special needs. The standard also formulates requirements for cleaning and maintenance.

EU Ecolabel for multipurpose and sanitary cleaners

EU Ecolabel is an label acknowledged by all member states of the EU as well as by Norway, Liechtenstein and Iceland. The voluntary symbol which was introduced in 1992 (Council Regulation (EEC) No 880/92) has gradually become a reference for consumers who want to contribute to pollution reduction by buying more environmentally friendly products and services. The EU Ecolabel helps consumers to identify products that have a reduced environmental impact throughout their life cycle and therefore commit to environmental sustainability.
